TRACK LIGHT. READ THE MORSE. CATCH THE MESSAGE.

Morse code light decoder and flashlight transmitter for iPhone.

Point your iPhone camera at any flashing light and Morse Watcher decodes the Morse code into text in real time. Type a reply and it flashes back in Morse with your flashlight — no internet or cell signal needed.

Available now on the iOS App

WHAT IT DOES

Read and send Morse code with light.

Free Morse code translator, right on this page

Tap **Converted text** in the live monitor at the top of this page, type any message, and see it translated into Morse code instantly. Tap the light to watch your message flash.

Try the translator ↑

Decode Morse code from a flashing light

Aim the camera at a flashlight, lamp, signal light, or another phone. Morse Watcher tracks the light, tells each flash apart as a dot or a dash, and turns the pattern into letters and words as it arrives.

Adapts to any sending speed

There is no speed to set. The decoder learns the timing of dots, dashes, and gaps from the signal itself, so it follows a slow beginner as well as a fast operator — and you can switch to custom timing when you need to.

Send Morse code with your flashlight

Type a message or dictate it, and Morse Watcher flashes it in Morse code with the iPhone flashlight using precise, even timing that another phone — or a person — can read.

One-tap SOS signal

Hear the code as you see it

Flash the international SOS distress pattern (··· --- ···) with the correct Morse timing straight from the home screen, without having to remember the code.

A sidetone beeps while the light is on, so you can follow the rhythm by ear and learn to recognise letters the way radio operators do.

Works offline, with Siri and Shortcuts

Everything runs on your iPhone, with no account and no connection required. Start watching, send a message, or flash SOS from Siri and the Shortcuts app.

WHO IT'S FOR

When light is the only signal.

Emergencies and the outdoors

Hikers, campers, and boaters can signal across a valley or a bay after dark when there is no phone coverage — and

Ham radio and Morse learners

Practise reading CW by sight and sound, check your own sending, and build speed with instant feedback on every

recognise an SOS when they see one.

character.

Scouts, classrooms, and families

Turn learning Morse code into a game: flash messages between windows, tents, or across a field and watch them decode.

Escape rooms and puzzles

Blinking-light clues in escape rooms, geocaches, and puzzle hunts are often Morse code. Point the camera and read the answer.

HOW IT WORKS

From flashes to text in three steps.

1. **Frame the light**

   Hold the phone steady, or lean it on something, and place the target box over the flashing light. Zoom in for distant signals.

2. **Let it lock on**

   Morse Watcher separates the light's on and off states and learns the sender's timing within the first few characters.

3. **Read the message**

   Dots, dashes, letter gaps, and word gaps appear as they are

detected, with the decoded text building up underneath.

Step-by-step setup tips are in the How to Use guide.

GUIDES

Learn Morse code signalling.

How to decode Morse code from a flashing light

Dot and dash timing, letter and word gaps, and how to read a light signal by eye or with your phone.

How to flash SOS with a flashlight

The SOS pattern, the correct timing, and how to signal for help with a flashlight or phone.

The best Morse code app for iPhone

Why Morse Watcher is built for reading flashing lights, where it shines, and what it costs.

How to use Morse Watcher

Setting up the camera, getting a clean lock on the light, and sending messages back.

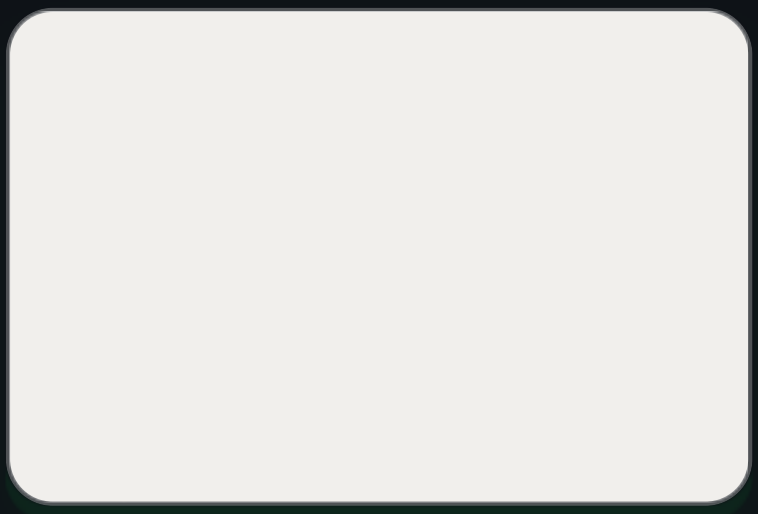

OFFLINE COMMUNICATION

Try Morse

Watcher to communicate.

When phone signal drops and internet is unavailable, Morse Watcher helps you send and receive simple messages using flashlight pulses and camera detection.

Two phones on fixed ground can exchange Morse patterns with stable framing, controlled flashing, and visible decode feedback.

FAQ

Morse code light questions.

▶ Can an iPhone decode Morse code from a flashing light?

- How fast can the Morse code be?
- How far away can the light be?
- Can I translate text to Morse code on this website?
- Does Morse Watcher need internet or cell signal?
- What is the Morse code for SOS?
- How long are a dot and a dash in Morse code?
